

SaveMyContacts

quick setup / user guide

Nokia 6600

**syncML
vCard**

Setting up Nokia 6600 to synchronise with SaveMyContacts
Please ensure your WAP provider has configured your phone for WAP/GPRS access.

syncML set up (Step by step guide)

Go to Menu and Select the *connectivity icon* - then go to *Synchronization* - Click *synchronisation*.

You will see option to select and name a sync profile. We suggest you name it SMC
Select access point i.e. vodafone live ;T-mobile WAP etc . Your access point is your WAP or GPRS connectivity option as provided by your Mobile operator.

Fill in the fields as follows;

Host address: www.savemycontacts.com/sync.jsp (please check spellings are accurate)

PORT: leave as displayed on phone. do not fill this field in.

User ID: your registered number in international format i.e. 447766xxxxxxxx

Password: Your 4 digit PIN used upon registration

You should now see two opposite arrows; right click

You should now see contact and calendars

Select contacts

Select yes

You should see the fields remote database

Type in *contacts*

Ignore the other fields

Sending contacts to application via SMS

(6600 users do not really need this option considering the much easier synchronisation option).

select *contact* you wish to backup

, then Select send contact

Find contact you want to back up and press Send .Select send as txt message and send to application number +447781 489444

(we recommend you save this number as a contact . Call it SMC).

Retrieving contacts from application

Compose SMS as in the following example. *smc* is the application name ; *223* is the retrieve command, the third field is your phone number starting with country code.

The fourth field is your PIN, the *symbols separate the fields so the application can understand your request, and the # symbol signals the end of the command .i.e. *smc*223*234803000000*1111#*

We advise that you save command as a text template which you can edit to suit!!!!

The application pauses after sending 10 contacts. To continue, send *smc*224* to application number. every contact retrieved will deduct a unit from your credit. For other commands you can send to the application please see next page.

Command List

222 Registration and subsequent topping up

223 retrieve all contacts

224 Confirm continue restore (also *yes can be used)

225 Halt restore

226 Status enquiry credit units contacts etc

227 Change of phone number notification

228 Retrieve specific contact i.e smc*228*23480300000*1111#yemi
