

**Sony Ericsson
K700i**

**SyncML
vCard**

SyncML set up (Step by step guide)

Select your internet connection for the sync application.

We send automatic configurations by text. This guide shows you how to set up your internet connection for the sync application.

If you have not received settings please go to the 'my details' section and select 'automatic setup' The settings will be sent to your handset.

Go to Menu and Select *connectivity* - then go to *Synchronization* - then new accounts and savemycontacts.

Select savemycontacts and click on the 'more' option

Then click on the 'edit' option.

Scroll down to 'connection' and click on it. This will bring up your list of internet connection options like WAP GSM and WAP GPRS. Select your preference and press save.

Go back to the synchronisation option select savemycontacts and start sync.

Sending contacts to application

Go to phonebook then select *manage contact*, then Select send contact
Find contact you want to back up and press Send .Select send as txt message and
send to country gateway number for example UK is +447781489444
(we recommend you save this number as a contact . Call it SMC. you can find
your country gateway number under the country info link).

Retrieving contacts from application

Compose SMS as in the following example. *smc* is the application name ; *223* is the
retrieve command, the third field is your phone number starting with country code.
The fourth field is your PIN, the *symbols separate the fields so the application
can understand your request, and the # symbol signals the end of the command
.i.e. *smc*223*447703000000*1111#*

We advise that you save command as a text template which you can edit to suit!!!!

The application pauses after sending 10 contacts. To continue, send *smc*224* to
application number. every contact retrieved will deduct a unit from your credit.
For other commands you can send to the application please see next page.

Command List

222 Registration and subsequent topping up

223 retrieve all contacts

224 Confirm continue restore (also *yes can be used)
