

**Sony Ericsson
T68i**

**SyncML
vCard**

Setting up T68i to synchronise

Please ensure your WAP provider has configured your phone for WAP/GPRS access.

syncML set up (Step by step guide)

Go to Menu and Select *connect* - then go to *Synchronization* - Click *synchronisation*. You should now see (synchronise, server settings and sound. Click *options* and then click remote settings. You should see options for remote login and applications Click remote login - you should see options for sync server and WAP profile; click sync server

You will now see three fields (*user id, password and URL*). you must fill all three fields. The URL field must be exactly as shown below. The URL field is case sensitive.

User ID: your registered number in international format i.e. 447766xxxxxxxx

Password: Your 4 digit PIN selected upon registration

URL: www.savemycontacts.com/sync.jsp

Press save /Ok and then go back to the screen showing remote settings

You should see options for remote login and applications

Select application and then select phone book

Fill in the database: field as shown below. The database name is contacts. Please note that this field is case sensitive.

Database: contacts

You will now be able to synchronise your phone with the SaveMyContacts application

Sending contacts to application using SMS

You should not need to do this as your phone has the more powerful sync option

Go to phonebook then select *manage contact*, then Select *send contact*
Find contact you want to back up and press *Send* .Select *send as txt message* and
send to country gateway number. For example UK number is +447781 489444
(we recommend you save this number as a contact . Call it SMC.A list of country SMS gateways can be
found under the 'country info' link on the user guide main panel).

Retrieving contacts from application

Compose SMS as in the following example. *smc* is the application name ; *223* is the
retrieve command, the third field is your phone number starting with country code.
The fourth field is your PIN, the *symbols separate the fields so the application
can understand your request, and the # symbol signals the end of the command
.i.e. *smc*223*447766570001*1111#*

We advise that you save command as a text template which you can edit to suit!!!!

The application pauses after sending 10 contacts. To continue, send *smc*224* to
application number. every contact retrieved will deduct a unit from your credit.
For other commands you can send to the application please see next page.

Command List

- 222 Registration and subsequent topping up**
- 223 retrieve all contacts**
